

# The Main Takeaway

What's the point of all this setup?

- If you're new to coding, **you don't need to understand any of this code yet.** The goal is to have a working environment—frontend, backend, database, mobile—so when you start building, everything's already there.
- **AI will be essential for the implementation.** Cursor and other AI-powered IDEs can write the code. Your job is understanding what you're building, overseeing, troubleshooting, and architecting, not necessarily memorizing syntax, although you will learn a lot about coding throughout this process.
